

TRANSWELD

T R A N S F O R M E R

INTRODUCTION

The leading professionally run Transformer manufacturing company in Nepal

Transweld Nepal is one of the leading professionally run transformer manufacturing company in Nepal situated in the Kathmandu valley. The company's founder late Mr. J.B. Shrestha (Nepal's one of the senior most and highly experienced electrical engineer) established the transformer manufacturing unit in 1989 and later renamed and established as Transweld Nepal Pvt. Ltd. in 1995.

Transweld has a manufacturing capacity from 5 kVA to 2000 kVA of 11/33 kV distribution transformers as per the latest IEC 76, IS 2026 and other equivalent international standards. Transweld has already manufactured various rated distribution transformers and successfully installed all over Nepal including industries, hydropower, micro hydropowers, embassies, hotels, hospitals, trading companies, rural electrification, NEA electricity utilities, NEA repair and maintenance and other various sectors.

20+ YEARS OF EXPERIENCE

DESIGN

Transweld's designs are carefully prepared to meet stringent requirement of the prevailing standards. The company's guiding factor is to insure long trouble-free service through special care in manufacturing and management process. The product is designed according to individual factors such as voltage, power, climate and many more, and meets the requirement of various tests.

CORE

Transweld uses low loss, cold rolled grain oriented (CRGO) magnetic silicon steel sheets from internationally reputed brands. (CNC cut-to-size annealed cores with precise dimensions, burr-free edge for core integrity increasing the transformer's reliability.) The cores are then assembled. The assembled cores are tested for pre no load losses before core-coil assembly process.

AMORPHOUS CORE

Amorphous core significantly reduces core losses which is about 65-75%.

Transweld has started manufacturing Amorphous metal core type distribution transformers alongside the conventional silicon steel core type distribution transformers.

Amorphous metal exhibits a unique random molecular structure unlike the rigid grain structure of the silicon steel. This, in turn, enables easy magnetization & demagnetization, thereby reducing hysteresis loss. Further processing of amorphous metal in very thin lamination (approximately 1/10th of silicon steel lamination thickness) enables significant reduction in eddy current losses.

Advantages of Amorphous Metal Transformers over Transformers with CRGO Silicon Steel:

- ✓ The thickness of Amorphous Metal is 0.025 mm against CRGO silicon sheet steel thickness 0.23-0.3 mm. Lesser in thickness in sheet results in lower eddy current loss
- ✓ Random molecular structure of amorphous metal causes less friction than CRGO when a magnetic field is applied. This allows easy magnetization and demagnetization significantly lowers hysteresis losses, thus amorphous core significantly reduces core losses which is about 65-75%
- ✓ Saves energy and therefore reduces greenhouse gases and other pollution
- ✓ Excellent option to reduce distribution losses and improve efficiency
- ✓ Superior electrical performance under harmonic condition. Possible to improve power quality and mitigate harmonics
- ✓ Lower temperature rise, slower deterioration of insulations and hence longer life
- ✓ Increase in use of power electronics has resulted in considerable amount of higher harmonics distortion in electrical power system.

WINDING

Transweld uses round enameled copper wire and triple paper covered rectangular copper strips to make HV / LV coils as required by the design. Latest HV and LV winding machines are used to wound coils. Special care is taken not to damage insulation of wires while wounding the coils.

DRYING & TRANSFORMER OIL FILLING

The core-coil assembly are placed in an oven to improve insulation resistance and remove accumulated moisture. The dried core-coil assembly are tanked and filled with high quality, clean, dry and tested oil. (IEC 296 standard)

TANK FABRICATION & PAINTING

The tanks are fabricated from mild steel electrically welded suitable bracing and stiffeners are provided for robust construction. Enough cooling radiators made from corrugated fins are provided to maintain the temperature rise within specified limits. The inside walls are painted with primer and varnished while outer surface is painted with epoxy based zinc chromate primer and coats of enamel paint of dark grey shade. All tanks are pressure tested before leaving the fabrication shop of factory.

TRANSFORMERS OIL

Transweld uses mineral oil made as per BS 148:1984 IEC 296 standard. The transformers oil shall be high quality, clean, and free from moisture.

TAP CHANGER

Off-circuit 7 position tap changer is incorporated in the transformer to provide a constant output voltage to avoid fluctuation.

OLTC (On Load Tap Changer) can be provided upon customer requirement.

ACCESSORIES

- ✓ HT & LT bushing
- ✓ Tap changer & drain valve
- ✓ Dehydrating breather
- ✓ Thermometer pocket
- ✓ Oil level indicator
- ✓ Lifting lugs & Earth terminal
- ✓ Name Plate
- ✓ Bi-direction wheels

TESTING & QUALITY CONTROL

Every Transweld distribution transformer is produced under strict supervision as per ISO 9001:2008 quality management systems. Such process starts with strict inspection of every incoming material to final products by trained personnel. Every transformer has to undergo following measurement and tests prior to delivery (routine tests).

- ✓ Measurement of winding resistance
- ✓ Measurement of voltage ratio test
- ✓ Measurement of insulation resistance
- ✓ Measurement of no load loss, load loss and impedance
- ✓ Excitation current test
- ✓ Induced potential test
- ✓ Polarity and phase relation test
- ✓ Applied potential test
- ✓ Oil & leakage test

MODE OF DELIVERY

AFTER SALES SERVICES

Transweld transformers are backed by prompt post-sales service carried out by our after sales and service department managed by highly skilled and experienced technicians. Product service technicians visit the customers site annually to check the performance of the transformers. This service continues even after the warranty period. On call service is also provided.

SOME OF OUR MAJOR CLIENTS

- World Trade Center, Tripureshwor
- T.U. Teaching Hospital, Maharajgunj
- Rastriya Nachghar, Jamal
- New Military Hospital, New Road
- Rising Mall, Durbar Marg
- Lagankhel Bhawan, Lagankhel
- Club Himalayan, Nagarkot
- British Council, Lainchaur
- Indian Embassy, Lainchaur
- Namaste Complex, Gairidhara
- Lotse Mall, Gongabu Bus Park
- Shangrila Housing, Kathmandu
- Jagadamba Plastic Industries
- Hotel Arts, Thamel
- Marusin Sitaka Construction Japan
- The Fort, Nagarkot
- Kalinchowk Bhagwati Darshan Pvt. Ltd.
- Khetan Group Corporate Office, Hattisar
- Chabahil Plaza, Chabahil
- Bir Hospital, Ratna Park
- Nepal Medical Council, Bansbari
- Nepal Dairy
- National News Agency
- National Medical College, Birgunj
- Kathmandu Medical College, Sinamangal
- Heritage Plaza, Kamaladi
- Kathmandu Plaza, Kamaladi
- People Plaza, New Road
- Pashupati Plaza, New Road
- Nami College
- Rastriya Shava Griha, Pradarshani Marg
- The Comfort Housing
- Oriental Housing
- ANK Construction
- CBC Construction
- Municipality Of Various States
- Mahadev Khimti Nirwan Sewa
- Delight Electricals
- Royal Nirwan Sewa
- Hydro Energy Concern P. Ltd
- Sharma & Company P Ltd
- Sarit International

STANDARD DIMENSION

The specification mentioned below cover core type, oil immersed, natural self cooled distribution transformers suitable for both outdoor and indoor installation.

Temperature Rise (Above Ambient Temperature)

Top Oil 50°C

Windings 55°C

POWER KVA	PHASE	VOLTAGE SYSTEM 11000-400 V					VOLTAGE SYSTEM 33000-400 V					NO LOAD LOSS (W)		LOAD LOSS 75°C (W)	% IMPEDANCE
